Who We Are

G2Mint was founded by a team of industry veterans with a proven track record in building transportation technologies. Our mission is to simplify the management and execution of a broker, shipper, or carrier's TRIP (Transportation, Rating, Integrations, and Partnerships).
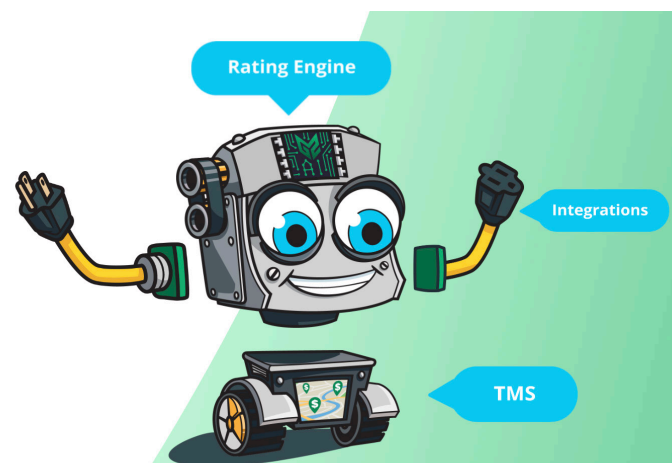

A decade ago, Dan Clark and his team of innovators changed the industry with Kuebix TMS. Much has evolved since then, and the need for a single connected platform has reunited the team to realize their vision: connecting brokers, shippers, and carriers to optimize sourcing, rating, and freight management. Our second-generation (G2) solution is fresh and modern, streamlines freight management, and saves money (Mint). Introducing G2Mint!
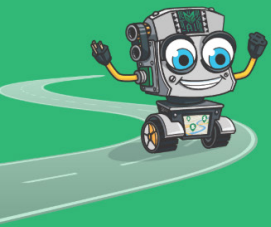

Today's Industry Problems

The transportation industry is disconnected, and most current systems weren't designed to handle today's needs. The demand for real-time sourcing, rating, and freight management has become a financial burden, hindering brokers, shippers, and carriers from competing effectively. Traditional, monolithic systems are difficult and costly to onboard, lacking the core functionality and flexibility needed to manage today's TRIP. The industry needs a better solution to manage transportation and rating, one that provides seamless integrations to augment core capabilities with industry-specific plug-ins.

Our Product

G2Mint is a modern application that can manage transportation for supply chains of any complexity. Our modular architecture makes it simple for brokers, shippers, and carriers to onboard and connect to Miles —an AI-enabled rate engine with integration connectors and the industry's most intuitive Transportation Management System (TMS). Miles features an easy-to-use app to simplify transportation by managing all or segments of your TRIP.

Miles helps brokers, shippers & carriers manage their TRIP.

Our Solution

If you're looking for a reliable rating solution to augment your existing systems, simply connect to Miles' stand-alone rate engine to configure, calculate, and manage your freight, commissions, and compliance. Miles' API connectors aggregate your carriers' rates and deliver real-time quotes to your customers.

If you need a fully integrated TMS, Miles delivers core functionality and preconfigured plug-ins to manage today's transportation needs. It's never been easier to consolidate orders, optimize modes, and manage and rate your freight from build to source to settle.

Once fully connected, our community of brokers, shippers, and carriers can engage systematically to automate the sourcing process. The G2Mint community makes it easy to find and build new partnerships for sourcing spot quotes, converting quotes to contracts, and sharing and expanding carrier capacity.

It's time to grow your revenue and reduce your costs with G2Mint. Our next-generation technology allows us to deliver a new version of a TMS: Transportation Management Simplified.

Where We Are Going

G2Mint is on a mission to revolutionize the future of digital transportation. We envision a single connected platform where brokers, shippers, and carriers can work together to optimize their TRIP. When all stakeholders are connected, AI can optimize the data to automate ordering, building, sourcing, and settlement processes.

G2Mint's modular applications, frictionless integrations, and modern platform will be the connection point for all other systems and platforms, optimizing the otherwise fragmented global freight network.
